

1 **Examining the Re-Translation Hypothesis: The Case of** 2 **Three Short Stories in the Saudi Literary System** 3

4 *Translation has an ultimate purpose of serving as a cross-cultural bilingual communication*
 5 *vehicle among peoples. As a result of their animated interaction with other cultures, Saudi*
 6 *readers became more interested in reading translated books that allow them to explore other*
 7 *cultures. Books vary in their characteristics and the strategies implemented in their*
 8 *translation. However, fiction has always been a mirror that reflects cultures. Therefore, it*
 9 *needs to be sensibly translated in accordance to the translation norms of the target audience.*
 10 *Nonetheless, cultures vary in the degree they perceive foreign cultures. Some audience might*
 11 *prefer target oriented translations while others favour source oriented translations. Reflecting*
 12 *on a comparative text analysis of a selection of three short stories written by prominent*
 13 *English writers, their translations as well as their retranslations, this paper attempts to identify*
 14 *the most prevalent strategies adapted in the rendering of cultural references driven by the*
 15 *social factors contributing to the translator's decision making process in the Saudi context.*
 16 *The paper discusses in particular the Retranslation Hypothesis developed by Berman, Gambier*
 17 *and Bensimon in the 1990s, in relation to Venuti 1998 Domestication and Foreignization*
 18 *approach. The findings, which refute the hypotheses within the Saudi literary system, are used*
 19 *to explore the close relevance of the strategic variation to social impacts, being variables that*
 20 *affect the translation outcome. The paper highlights the occurrence of cultural references*
 21 *within the short stories and the frequency of the used procedures in the rendering, to determine*
 22 *the prevalent ones with the highest potential for conveying the intended meaning. A cross*
 23 *tabulation of the two important variables- classification of culture and translation strategy-*
 24 *assists in determining the position of the Saudi literary system on the Domestication/*
 25 *Foreignization scale. Results are investigated and an understanding of the phenomena being*
 26 *studied is presented and discussed. Finally, a conclusion on the Retranslation Hypothesis, in*
 27 *the Saudi context, is offered.*

1 **Introduction**

2

3 The main objective of this paper is to elaborate on translating culture
 4 within the Saudi literary system through retranslation. With regard to the
 5 change in the norms that govern the translation process, re-translation is
 6 considered an important feature, a pervasive aspect that has been profoundly
 7 debated in the field of translation studies. What can be found in the analysis of
 8 re-translations is overall a more complex, multifaceted representation.
 9 Furthermore, there is a demand for further testing of re-translations to
 10 distinguish the motives and objectives of this phenomenon and accordingly
 11 evaluate the core of the controversial Re-translation Hypothesis. Another
 12 matter of importance is the fact that the study of re-translations has not
 13 previously been conducted in the domain of the Saudi literary system, so this
 14 study will notably add to the literature on the matter in a wider scope.

15

16 This study aims to review the theoretical conventions of re-translation and
 17 investigate some of these conventions based on the data collected from three
 18 case studies in the form of short stories and their two translations. Generally
 19 speaking, the word re-translation can refer to three things. Conventionally, it
 20 denotes an “indirect”, “intermediate”, “relay” or “second-hand” translation
 21 (Shuttleworth and Cowie, 1997: 76). This is attributed to the procedure of
 22 translating through a mediating language whereby a text is translated into a
 23 language and then re-translated from the previous translation into another

1 language. An example of this from the Saudi literary system is the translation
2 of *Around the World in Eighty Days* by the French author Jules Verne in 1873.

3 The second indication is “back translation”, meaning the translation of an
4 already existing translation back into the source language. This can occur for
5 several reasons, one of which would be the loss of the source text while there is
6 still demand for the text in the source language. Back translation can also be
7 carried out to compare and analyse translated texts (Almberg, 1995: 925).

8 The third meaning of re-translation is the most common, referring to an
9 additional translation of a source text in the same target language. This is also
10 called by some scholars “new translation” or “multiple translations” (Almberg,
11 1995: 927). In the present study, the focus is on this implication of the word re-
12 translation.

13 Re-translation of literary texts may take place to help update the original
14 texts, raise their popularity or elevate their sales. Re-translation is usually
15 carried out by a different translator than that of the previous translation and the
16 time span may vary from a few years to decades. This point is confirmed in the
17 re-translation analysed in this study, which demonstrates the time gap between
18 the first and second translations. Regarding the first pair, only a year separates
19 them, but the second pair were published eleven years apart. The third pair
20 have a nine-year duration between them.

21 Although the material for analysis was chosen carefully, short stories are
22 generally considered relatively simpler for analysis due to their short length.
23 However, the length of the text to be re-translated is not to be viewed as the
24 heart of the matter. In fact, most literary re-translations are short texts on the

1 grounds that short texts take less time and effort. For this reason, poems are
 2 one of the most common forms of literature to be re-translated, as they are
 3 relatively short and are almost never the length of a novel. Additionally, the
 4 length of the text under analysis would be an issue if the researcher were to
 5 depend on the analysis of one short story and subsequently convey results and
 6 generalize conclusions based on this analysis solely. However, in this research
 7 the deliverables differ.

8 The study in hand attempts to answer three main questions:

- 10 1. To what extent is the Re-translation Hypothesis valid: is the presence of
 11 re-translations in the Saudi literary system down to increased
 12 acquaintance with the source culture? (Koskinen & Paloposki, 2004).
 13 To what extent does it reflect the translation norms?
- 14 2. How often are the identified translation strategies applied by each of the
 15 translators?
- 16 3. What is the percentage of tendency towards domestication / target-
 17 oriented strategies and foreignization / source-oriented strategies as
 18 reflected in the parallel analysis of the texts?

20 Re-translations are performed and made accountable in the literary
 21 systems they belong to, yet analysis of re-translations is infrequent. As Susam-
 22 Sarajeva (2003: 2) notes, “although the practice itself is common, theoretical
 23 discussions on the subject are rather rare [...] currently, there is no detailed or
 24 systematic study on re-translations per se” (2003: 2). This research gap is true

1 in general and not only in the Saudi context where translation, overall, is
 2 characterised as evolving at a slower pace. It should be noted that several
 3 studies have examined re-translations of English literary work into Arabic, but
 4 to the best of the researcher's knowledge, there is no study that examines the
 5 Re-translation Hypothesis within the Saudi literary system. Therefore, as there
 6 is a clear gap in this specific area, the present study aims to respond to this gap
 7 by undertaking a comprehensive case study into three short stories and their re-
 8 translations, the findings of which will look into the Re-translation Hypothesis
 9 and uncover the socio-cultural effect on the production of target texts, in
 10 particular the norms governing translating cultural references for a Saudi
 11 audience.

12 The value of this study additionally lies in pointing out the norms and
 13 determining the appropriateness of different translation strategies as a
 14 prerequisite for translators within a specific culture (Toury, 1995: 53). In this
 15 regard, Toury also maintains that re-translation is an act of planning, as it
 16 "always entails some change on behalf of the receiving culture." In addition,
 17 Brownlie (2006:150) surmises that examining re-translations can "reveal
 18 changing norms and ideologies in society". This study also aims to propose a
 19 repeatable methodology for the exploration of re-translations for future
 20 research.

21 An important domain of investigation within Translation Studies is
 22 Descriptive Translation Studies. This aims to study real-life examples of
 23 translated texts, comparing them against their source texts to define the shifts
 24 detected in them and then using them to explain the possible impacts, including

1 the norms, that might have led to the target text. Looking into re-translations of
2 texts offers an even more in-depth view of the phenomena and allows
3 exploration of the changing norms that may result from the passage of time.
4 Toury (1995), Venuti (2003), and Pederson (2005) acknowledge the two poles
5 of source culture or target culture inclination. Toury refers to it as the initial
6 norms whereby the translator is directed to abide by the norms of the target
7 culture to make an “acceptable translation” or to the norms of the source
8 culture to make an “adequate translation”. Venuti refers to domestication and
9 foreignization in a similar vein, and Pederson refers to the source-oriented and
10 the target-oriented approaches.

11 This section identifies translation shifts and norms that can be pointed out
12 when examining the Re-translation Hypothesis as a means of valuing the scale
13 of closeness or divergence, and recording the behaviour of re-translation
14 through time.

15 This paper starts with an introduction that states an overview of the
16 hypothesis and the purpose of this paper. It also states the research questions.
17 The second section is the theoretical deliberations of the retranslation
18 hypothesis within the field of translation studies. After that, a section is
19 allocated for the literature review where a discussion of several studies is
20 presented. Then the methodology of the paper is offered which is divided into
21 subcategories: scope, material, and method. Moreover, the three case studies
22 are presented including the result and discussion of each one. Finally, at the
23 end of the paper is the conclusion, which ties the three case studies and
24 proposes the results.

1 **Re-translation in Translation Studies**

2

3 The phenomenon of re-translation in Translation Studies has been
4 discussed along to two distinct lines. The first is the Re-translation Hypothesis,
5 developed by French translation scholars Antoine Berman, Yves Gambier and
6 Paul Bensimon in the 1990s. Their consensus view is that the re-translation of
7 literature is introduced primarily due to the aging of the existing translation and
8 the target culture's predisposition to amend the target text by presenting any
9 foreignness that may have been restricted in the previous translation. Based on
10 this hypothesis, re-translations are observed on a scale that shows a progressive
11 degree of foreignization, while the first translation is viewed as more
12 domesticated. Berman's focus was mainly on the re-translation of literature,
13 and he strongly argued that the success of a translation is not obtained at the
14 first attempt. For a translation to succeed it should be delivered several times in
15 the form of re-translations, each time gaining partial further completion (as
16 cited in Dastjerdi & Mohammadi, 2013).

17 Another view is that elucidated by Bensimon (1990) where he argues that
18 previous translations tend to be target-oriented while re-translations are source-
19 oriented because a culture is often hesitant to accept a text that is distinguished
20 as foreign, so for the foreign text to be welcomed into the target culture, it
21 should be modified to the target culture. After that, since the text has already
22 been presented to the target culture, some of its foreignness is uncovered, and
23 the source text can be translated again with a more source-oriented tendency
24 (as cited in Brownlie, 2006: 96).

1 The other track in the re-translation phenomena states that re-translations
2 do not necessarily eschew domestication. Although this track has shown that
3 the motive of re-translation can be the target culture's changing ideological and
4 social context, adherents of this view believe that re-translations aim to deliver
5 additional interpretations of the source text. They promote the existence of
6 various translations for the same text, as each can have different intentions.
7 Venuti (2003: 25), however, proposes another reason for re-translations,
8 arguing that they intentionally challenge previous translations for the sake of
9 deliberately competing with them and to "establish the difference". This view
10 rationalises the differences between previous translations and re-translations as
11 being guided more by social or ideological grounds. The perception he draws
12 on is that any new re-translation, no matter the time span that separates them,
13 has the chance to challenge previous translations. This opposes the view that
14 aging is the main cause for re-translations. Venuti's main conception of the
15 translator's visibility is evident in his views on the phenomena of re-
16 translations.

17 Another significant opinion is that of Chesterman (2000, 2004) where he
18 argues that re-translation is a means of illuminating causal models and
19 potential universal features of translation. At first, Chesterman believed that the
20 Re-translation Hypothesis is a "descriptive hypothesis that can be formulated
21 as follows: later translations (same ST, same TL) tend to be closer to the
22 original than later ones" (Chesterman, 2000: 23). He later formulated this more
23 succinctly as late translations tend to be closer to the ST. Nevertheless, there is
24 still no definite answer to this matter.

1 A noteworthy argument is that of Pym (1998) where he distinguishes
 2 between two states of retranslation. He argues that the act of re-translation may
 3 occur under two circumstances: passive and active re-translation. Passive re-
 4 translation is when a re-translation is published with ignorance of the existence
 5 of a previous translation, while active re-translation is when there is a
 6 disagreement with the previous translation on any grounds.

7 Moreover, a re-translation can exist due to external elements, such as
 8 commercial or political reasons, or it could exist due to interest or change in
 9 the social or historical elements in a target culture (Cadera & Marthn-Matas,
 10 2017: 109).

11

12

13 **Literature Review**

14

15 Several studies have been undertaken to explore re-translations on
 16 different levels. However, since the focus in this research is on the translation
 17 of culture, the review of the studies conducted will include comparable studies.

18 De Letter (2015) conducted a study on four Dutch re-translations of W. M.
 19 Thackeray's *The Rose and the Ring* to estimate the amount of foreignization in
 20 order to test the Re-translation Hypothesis. The study examined seven
 21 categories: Fictional Names, Cultural Geography, Natural Geography,
 22 Ethnography, History, Society and Culture and the employment of twenty one
 23 translation strategies: Addition, Calque, Copying, Copying plus additional
 24 explanation, Deletion, Equivalence, Exonym, Explication, Generalization,

1 Literal translation, Loanword, Loan-based neologism, Normal dictionary
 2 translation, Paraphrase, Phonetic or morphological adaptation, Replacement by
 3 another name from the target language, Replacement by a name with another
 4 or additional connotation, Replacement by a more widely known name from
 5 the source culture or an internationally known name, Replacement of a
 6 personal name by a common noun, and Substitution and Translation of names
 7 with a particular connotation. The results of this study showed that the re-
 8 translations were inconsistent throughout. The main finding was that the
 9 second re-translation is generally more foreignized than the third re-translation.
 10 This steered the researcher to conclude that the Re-translation Hypotheses,
 11 based on the study's findings in accordance to the categorization and
 12 translation strategies applied, is refuted. Another notable study was conducted
 13 by Koskinen and Paloposki (2004), who used a case study of re-translations of
 14 *Alice's Adventures in Wonderland* and *The Vicar of Wakefield* into Finnish to
 15 examine the Re-translation Hypothesis. The outcome of their study suggests
 16 that the hypothesis is not relevant to all re-translations, although they assume
 17 the Re-translation Hypothesis is only proved during the initial stages of the
 18 development of literature.

19 Furthermore, Feng (2014) examined the Re-translation Hypothesis by
 20 analysing two English translations of the Chinese novel *Sanguo Yanyi*, first
 21 published in 1994 and again in 2002. The research focused on cultural
 22 references, applying the Lambert and van Gorp Synthetic Scheme for
 23 Translation Description, which includes Preliminary data, Macro level
 24 structure, Micro level structure and Systemic context. The findings suggest that

1 the first translation tends to be domesticated and the second more foreignized.
 2 The results, therefore, seem to be in line with the general assumption of the
 3 hypothesis and hence support its gist.

4

5

6 **Methodology**

7

8 *Scope*

9

10 This paper is located within the frame work of Descriptive Translation
 11 Studies suggested by Gideon Toury (1995). DTS mainly examines translations
 12 on three levels. First, the translation product. Second, The function of the
 13 translation in the target system. Finally, the translation process. Although the
 14 three levels unavoidably overlap in occasions which makes it impossible to
 15 avoid the amplification of the two other levels, the examination and exploring
 16 of Product is the primary scope of the ST-TT analysis in this paper since the
 17 aim is a comparison of strategies employed.

18 When considering material to examine the hypothesis, a strong orientation
 19 leads to the genre of literature rather than other fields. Brownlie (2006: 146)
 20 and Aaltonen (2003) imply that the most frequently re-translated works are
 21 sacred texts and literary works. The deliberate choice of analysing three source
 22 texts along with their translations and re-translations rather than just one is
 23 designed to allow conclusions to be drawn based on sufficient results.

1 Considerations of space and time have led to certain limitations in the
 2 present study. Ultimately, the case study will involve three source texts and
 3 their translations and re-translations, and only versions published by Saudi
 4 publishers are considered in order to maintain the boundaries of the research.
 5 This necessarily means the exclusion of other Arabic translations and re-
 6 translations from different literary systems, which is limiting because Arabic is
 7 the official language of 25 countries that share a number of aspects but differ
 8 dramatically in others, especially in relation to culture and norms. However, to
 9 adhere to the scope of the research, the texts within the Saudi literary system
 10 were the heart of the study, with the main aim being to examine the factors and
 11 norms within this particular target. Therefore, limiting the data in this way
 12 ensures definite results.

13 A further point is the consideration of short stories as the material of
 14 analysis. Limiting the analysis to this specific type of literature is necessary as
 15 despite thorough research into re-translations in the particular context, only
 16 these three texts were located. This might be a limitation of the current
 17 research, so other translations and re-translations might yet emerge and expand
 18 the limits for future research.

19 To avoid the pitfalls detailed by other researchers, I limited the research
 20 subject to cover the testing of the Re-translation Hypothesis in relation to the
 21 domestication and foreignization of cultural references within the Saudi literary
 22 system. Paloposki and Koskinen (2010) state that they had to refocus their
 23 study from testing the Re-translation Hypothesis in general to a narrower focus
 24 and context because the complexity of the re-translation phenomena and the

1 laboriousness of research made it necessary to limit the corpus and area of
 2 study (Cadera, 2016: 8). The number of source texts and their re-translations is
 3 also a matter of importance related to the limitations in this study. Since the
 4 study examines the norms of translating culture for a Saudi audience, the texts
 5 that would undergo analysis had to be the product of this specific culture, but
 6 unfortunately the Saudi translation industry is not very active. As a matter of
 7 fact, searching for translations, let alone re-translations, within the intended
 8 specifications was a daunting task. A point in my favour is the chance to
 9 expand the scope of analysis and discussion of the material obtained into three
 10 studies.

11 *Material*

12
 13
 14 The data is distributed in three case studies which are analysed separately.
 15 Each case study contains an English source text and two Arabic target texts
 16 published in Saudi Arabia. Given that the translations and re-translations are all
 17 sections in published collections, a point worth mentioning is the means by
 18 which they were located.

19 The first case study consists of the English source text *The Tell Tale Heart*
 20 written by Edgar Allan Poe, and its two Arabic translations by Khalid Alawadh
 21 and Khalaf Alqurashi. The translation of Khalid Alawadh is part of a collection
 22 of translated short stories published in 1992 by Jeddah Literary Club. In a
 23 similar manner, the translation of Khalaf Alqurashi is also part of a collection
 24 of translated short stories yet published in 1993 by Taif Literary Club.

1 The second case study consists of the English source text *While the Auto*
 2 *Waits* written by O. Henry, and its two translations by Khalid Alawadh and
 3 Hessa Alammam. Khalid Alawadh's translation is part of his collection of
 4 translated short stories mentioned above. Likewise, Hessa Alammam's
 5 translation is part of a collection of translated short stories nevertheless
 6 published in 2003 by Alobaikan publishing company.

7 The third case study consists of the English source text *Hearts and Hands*
 8 written by O. Henry and its two translations by Hessa Alammam and Khalaf
 9 Alqurashi. Hessa Alammam's translation is part of the collection of translated
 10 short stories published in 2003 mentioned earlier, and Khalaf Alqurashi's
 11 translation is part of a collection of translated short stories published in 2012
 12 by Mecca Literary Club.

13 *Method*

14
 15 For the purposes of the present research, it was crucial to recognize that
 16 there are different means of conducting translation research which influence
 17 the limits and ambitions of a stylistic study as well as the methods used in
 18 stylistic analysis.

19 The first step was to compile a corpus of all the cultural references. The
 20 classification of culture proposed by Newmark (1988) is an extensive one and
 21 therefore ideal for this study, comprising five main categories: ecology;
 22 material culture; social culture; organizations, customs and ideas; gesture and
 23 habits. These items were sought in the corpus and the cultural references were
 24 extracted from the source texts and aligned to their corresponding word or

1 phrase in the target texts. The third phase was to determine the translation
 2 strategy applied in the rendering by each translator. This study utilises
 3 Pederson's (2005) proposed strategy that includes six strategies: Retention,
 4 Specification, Direct Translation, Generalization, Substitution and Omission.
 5 The first three strategies are source oriented and the three later are target
 6 oriented. This aligns with Venutie's domestication and foreignization theory.
 7 Based on these case studies, generalizations and conclusions can be drawn.

8 For ease of reference, Newmark's categories and Pederson's strategies are
 9 numbered in the Appendix as shown in the following tables:

11 **Table 1. Newmark's Categories**

Ecology	Material Culture	Social Culture	Organizations, Customs & Ideas	Gesture & Habits
1	2	3	4	5

13 **Table 2. Pederson's Strategies**

Retention	Specification	Direct Translation	Generalization	Substitution	Omission
1	2	3	4	5	6

16 **First Case Study: Analysis of *The Tell Tale Heart***

18 *The Tell Tale Heart* is a short story by American writer Edgar Allan Poe in
 19 1843. The first translation was published in a collection of short stories
 20 translated into Arabic by Khalid Awadh and published by the Jeddah Literary
 21 Club in 1992. The re-translation was published a year later in a collection of
 22 short stories translated by Khalaf Alqurashi and published by the Taif Literary
 23 Club. By Using Newmark's compiled classification of culture, a total of 13

1 cultural items were extracted from the source text (the full list is provided as
 2 Appendix A at the end of the paper). In committing to the affiliated numbers
 3 for culture and strategies, each cultural reference was designated two numbers:
 4 one in the 'type of cultural reference' column and the other in the 'translation
 5 strategy' column. The Table 3 below shows the total number of cultural
 6 references and strategies applied in the two translations. Analysis and
 7 calculation of the frequency and percentage of the strategies employed by each
 8 translator are shown in the graph in Figure 1.

10 **Table 3.** *Frequency and Percentage of the Strategies in the First Case Study*

Strategies	Awadh		Alqurashi	
	Freq.	Per.	Freq.	Per.
Retention	0	0%	0	0%
Specification	0	0%	0	0%
Direct Translation	5	38%	4	31%
Generalization	1	8%	1	8%
Substitution	4	31%	6	46%
Omission	3	23%	2	15%

11

12 **Figure 1.** *Percentage of the Strategies Implemented by Each Translator in the*
 13 *First Case Study*

14

The quantitative results of the primary analysis of cultural references as illustrated in the table above demonstrate the distribution of the 13 cultural references located in this short story: 1 ecology, 3 material culture and 9 organizations, customs and ideas.

With regard to translation strategies, both translators applied four of the six designated strategies: Awadh applied 5 Direct Translation (38%), 1 Generalization (8%), 4 Substitution (31%) and 3 Omission (23%), while Alqurashi applied 4 Direct Translation (4%), 1 Generalization (8%), 6 Substitution (46%) and 2 Omission (15%).

Table 4. *Cross Tabulation of Culture Category and Translation Strategy in Alawdh's Translation*

Count of Translation Strategy (Awadh)	Column Labels				Grand Total
Row Labels	3	4	5	6	
1	1				1
2	2	1			3
4	2		4	3	9
Grand Total	5	1	4	3	13

Table 5. *Cross Tabulation of Culture Category and Translation Strategy in Alqurashi's 1993 Translation*

Count of Translation Strategy (Alqurashi)	Column Labels				Grand Total
Row Labels	3	4	5	6	
1	1				1
2	1		2		3
4	2	1	4	2	9
Grand Total	4	1	6	2	13

Cross-tabulation of the variables, the cultural references and the translation strategies, resulted in the following frequencies: in the domain of Newmark's

1 first categorization, ecology, there is only 1 item, with both translators opting for
2 the same strategy: Direct Translation.

3 The second cultural category found in the short story is material culture.
4 Awadh applied Direct Translation to 2 items and Generalization to 1 item, while
5 Alqurashi applied Direct Translation to 1 item and Substitution to 2 items.

6 The third and final category is Organizations, customs and ideas. For this,
7 Awadh applied Direct Translation to 2 items, Substitution to 4 and Omission to
8 3, whereas Alqurashi applied Direct Translation to 2, Generalization to 1,
9 Substitution to 4 and Omission to 2.

10 The translations share similar patterns. For example, both present similar
11 translations for *in the heaven and in the earth, in hell, midnight, in the chimney*,
12 applying Direct Translation. They also both apply Substitution to *villains* أيها
13 الأشرار. and both omit *gentleman* and *almighty God*.

14 Yet, they differ slightly in other approaches: Awadh omits *oh God* while
15 Alqurashi applies Generalization by rendering it as يا إلهي B.T *My lord*. Another
16 similar example of their difference is the strategy applied when translating *dark*
17 *lantern*. Awadh applies Direct Translation فانوساً اسوداً B.T *black lantern* while
18 Alqurashi applies Substitution المصباح B.T *the lamp*.

19 In translating this short story the translators used various strategies. In terms
20 of identifying whether the translations are source- or target-oriented, a
21 calculation of the source-oriented strategies (Retention, Specification and Direct
22 Translation) and the target-oriented strategies (Generalization, Substitution and
23 Omission) was carried out. The following tables illustrate the findings of these
24 calculations.

1

2 **Table 6.** *Source-Oriented vs. Target-Oriented Strategies in the First Case*
 3 *Study (Alawadh)*

	Awadh	
	Source-oriented	Target-oriented
	0	1
	0	4
	5	3
Sum	5	8
Percentage	38%	62%

4

5 **Table 7.** *Source-Oriented vs. Target-Oriented Strategies in the First Case*
 6 *Study (Alqurashi)*

	Alqurashi	
	Source-oriented	Target-oriented
	0	1
	0	6
	4	2
Sum	4	9
Percentage	31%	69%

7

8 It is clear that there is no significant difference between the two translations
 9 in terms of their orientation toward a specific culture. When translating cultural
 10 terms, 62% of Awadh's strategies are target-oriented and 38% are source-
 11 oriented and Alqurashi tends slightly more target-oriented strategies (69%), with
 12 only 31% source-oriented strategies.

13 Both translators lean towards domesticating their translations. The time of
 14 publication could be the major reason for this, as according to the hypothesis of
 15 this study it is clear that on the timescale of the translation industry in Saudi
 16 Arabia, older translations are impacted more by the social and cultural factors of
 17 the target system. Therefore, the products of that era lean towards domesticating
 18 cultural items to meet the approval of all the parties involved, whether that be the

1 target audience and how much foreignization they tolerate or the ideology of the
2 publisher or translator.

3 Religion is a central element in the features of a culture. In spite of the
4 quantitative conclusions, rational observation leads us to note that both
5 translations are conservative when dealing with religious references. This might
6 be due to the highly religious atmosphere of the time (the 1990's), where
7 openness to the concepts of religions other than Islam, the only religion of the
8 Saudi population, was considered deceptive to the Islamic identity. The majority
9 of people were therefore not open to other religions and subsequently any of
10 their symbols, which may have been what led to the omission of *Almighty God*
11 by both translators.

12 To arrive at a conclusion about the occurrences of source- or target-oriented
13 strategies in the literary text under analysis, a close study was conducted. A short
14 story and its translations were compared, and the results show that of the 5
15 different categories proposed by Newmark, the text contains cultural terms related
16 only to ecology, material culture and organization, customs and ideas.
17 Furthermore, analysis of the extracted cultural terms suggests that of the six
18 strategies proposed by Pederson, the general tendency of the translations is toward
19 those adhering to the target culture (Generalization, Substitution and Omission).

20 In conclusion, both translations of *The Tell Tale Heart* support domesticating
21 cultural references more often, so in relation to examining the Re-translation
22 Hypothesis within this specific content, and with the implemented procedures in
23 conducting the analysis (including the categorising of culture and the strategies of
24 translating these references), it could be stated that the assumptions of the

1 hypothesis are not applicable in this particular study. That is, the first and second
 2 translations deal with cultural references.

3

4

5 **Second Case Study: Analysis of *While the Auto Waits***

6

7 *While the Auto Waits* is a short story by the American writer O. Henry, first
 8 translated in Saudi Arabia by Khalid AlAwadh in 1992 and published by the
 9 Jeddah Literary Club as part of a collection of translated short stories. Over a
 10 decade later, in 2003, Hessah Alammam re-translated the short story and it was
 11 published by Alobaikan also as part of a collection of short stories. According to
 12 the Re-translation Hypothesis under examination, it is important to emphasize the
 13 11-year gap between the two translations. A total of 23 cultural items were
 14 located in the source text (full list provided in Appendix B at the end of the
 15 paper). After locating cultural references in the ST and tracing their
 16 corresponding words or phrases in the two translations, the next step was to
 17 distinguish the strategy implemented in rendering each item. Table 8 below
 18 shows the total number of cultural references and the strategies applied in the
 19 two translations. An analysis and calculation of the frequency and percentage of
 20 the strategies employed by each translator are shown in the graph underneath, in
 21 Figure 2.

22

23

1 **Table 8.** *Frequency and Percentage of the Strategies in the Second Case Study*

Strategies	Khalid Alawadh		Hessa Alammar	
	Freq.	Per.	Freq.	Per.
Retention	4	17%	5	22%
Specification	0	0%	0	0%
Direct Translation	5	22%	4	17%
Generalization	6	26%	4	17%
Substitution	5	22%	8	35%
Omission	3	13%	2	9%

2

3 **Figure 2.** *Percentage of the Strategies Implemented by Each Translator in the*
 4 *Second Case Study*

5

6

7 The quantitative results from the primary analysis of cultural references as
 8 illustrated in the table above demonstrate the 23 cultural references that were
 9 located within this short story. The distribution of cultural references was as
 10 follows: 10 material culture, 5 social culture, 7 organizations, customs and
 11 ideas and 1 gesture and habits.

12 As for the translation strategies employed, both translators applied the
 13 same five of the six strategies, although a bit differently. Alwadh applied 4

Retention (17%), 5 Direct Translation (22%), 6 Generalization (26%), 5 Substitution (22%) and 3 Omission (13%). Alammar implemented the same strategies but in the following proportions: 5 Retention (22%), 4 Direct Translation (17%), 4 Generalization (17%), 8 Substitution (35%) and 2 Omission (9%).

Table 9. *Cross Tabulation of Culture Category and Translation Strategy in Alawadh's Translation*

Count of Translation Strategy (Awadh)	Column Labels					Grand Total
Row Labels	1	3	4	5	6	
2	1	1	4	3	1	10
3		3	2			5
4	3	1		2	1	7
5					1	1
Grand Total	4	5	6	5	3	23

Table 10. *Cross Tabulation of Culture Category and Translation Strategy in Alammar Translation*

Count of Translation Strategy (Alammar)	Column Labels					Grand Total
Row Labels	1	3	4	5	6	
2	1	2	2	3	2	10
3		1	1	3		5
4	4	1		2		7
5			1			1
Grand Total	5	4	4	8	2	23

Cross-tabulation of the cultural references and the translation strategies resulted in the following frequencies: in the realm of material culture, Awadh applied Retention to 1 item, Direct Translation to 1 item, Generalization to 4 items, Substitution to 3 items and Omission to 1 item, resulting in a tendency of utilising Generalization the most. In the same domain, Alammar applied

1 Retention to 1 item, Direct Translation to 2 items, Generalization to 2 items,
 2 Substitution to 3 items and Omission to 2 items, with his most common
 3 strategy being Substitution. One example to illustrate the difference is: *the men*
 4 *who surrounded me dancing like little marionettes* was translated by Awadh
 5 using Generalization, as الرجال المحيطين بي يرقصون كالدمى B.T *the men*
 6 *surrounding me dancing like dolls*, while Alammar simply omitted it.

7 The second realm for analysis is social culture. Awadh applied two
 8 strategies, 3 Direct Translation and 2 Generalization, while Alammar applied 3
 9 strategies, 1 Direct Translation, 1 Generalization and 3 Substitution. This
 10 indicates that Alammar tends to use Substitution when translating social
 11 cultural elements. For instance, Awadh Generalizes *balls* to حفلات B.T *parties*
 12 whereas Alammar substitutes it to ولائم الغداء و العشاء B.T *lunch and dinner*
 13 *banquets*.

14 The third realm is organizations, customs and ideas. Awadh applied four
 15 strategies: 3 Retention, 1 Direct Translation, 2 Substitution and 1 Omission,
 16 and Alammar applied three: 4 Retention, 1 Direct Translation and 2
 17 Substitution. For both translations, the general tendency of translating cultural
 18 references that fall under this category is Retention. An example is clear in the
 19 translation of *dining at the Waldorf*. While Awadh omits the cultural reference
 20 altogether, Alammar applies the Retention strategy and renders it as تناوله طعام
 21 (العشاء في (الوالدورف).

22 The final domain in the analysis is gesture and habits, and only 1 reference
 23 was located: *champagne is cooled in the bottle and not by placing ice in the*
 24 *glass*. For this, Awadh omits the cultural element while Alammar applies the

- 1 Generalization strategy, making it "الشرباء في أقداح" B.T the
 2 trend now is to put the ice in the drinking glasses.

3 As previously explained, the translators used various strategies when
 4 translating the short story, but in terms of identifying whether the translations
 5 are source- or target-oriented, a calculation of the source-oriented strategies
 6 (Retention, Specification and Direct Translation) and the target-oriented
 7 strategies (Generalization, Substitution and Omission) was performed as well.
 8 According to the data, both translators of *While the Auto Waits* used five of the
 9 six strategies presented in the framework. The strategy of Specification was not
 10 employed in the translations. The following tables illustrate the findings of
 11 these calculations:

12
 13 **Table 11.** Source-Oriented vs. Target-Oriented Strategies in the Second Case
 14 Study (Awadh)

	Awadh	
	Source oriented	Target oriented
	4	6
	0	5
	5	3
Sum	9	14
Percentage	39%	61%

15
 16 **Table 12** Source-Oriented vs. Target-Oriented Strategies in the Second Case
 17 Study (Alammar)

	Alammar	
	Source oriented	Target oriented
	5	4
	0	8
	4	2
Sum	9	14
Percentage	39%	61%

18

19 In conclusion, to determine the bias of the two translations, whether
 20 towards source or target culture, a close study of the way each translator dealt
 21 with cultural reference was conducted. The two translations of the short story

1 were compared and contrasted, and it was found that both translators dealt with
 2 the terms similarly, with the general tendency in both translations being to
 3 adhere to the norms of the Saudi literary system. Revisiting the Re-translation
 4 Hypothesis, it can be stated that re-translations are not necessarily more
 5 foreignized. Although there is a time span of 11 years between the two
 6 translations, it might still not have been permissible to cross the dominating
 7 translation norms in the target system. Translation norms in 1992 and 2003
 8 may have been similar, as reflected in the analysis of this case study. Despite
 9 some differences in the ways the translators dealt with culture in their
 10 translations, the calculated general tendency suggests adherence to the same
 11 norms.

14 **Third Case Study: Analysis of *Hearts and Hands***

16 *Hearts and Hands* is a short story by the American writer O. Henry, first
 17 published by Alobaikan in Saudi Arabia in 2003 within a collection of short
 18 stories translated by Hessa Alammar. Khalaf Alqurashi re-translated it 9 years
 19 later, in 2012, and it was published by Mecca Literary Club within a collection
 20 of short stories. A total of 15 cultural items were found in the source text (a full
 21 list is provided as Appendix C at the end of the paper). First of all, cultural
 22 references were found in the ST and their corresponding words or phrases in
 23 the two translations were located. The next step was to distinguish the strategy
 24 executed in rendering each item in the two translations. The table below shows

1 the number and percentage of cultural references and the graph under it shows
 2 the strategies applied in the two translations:

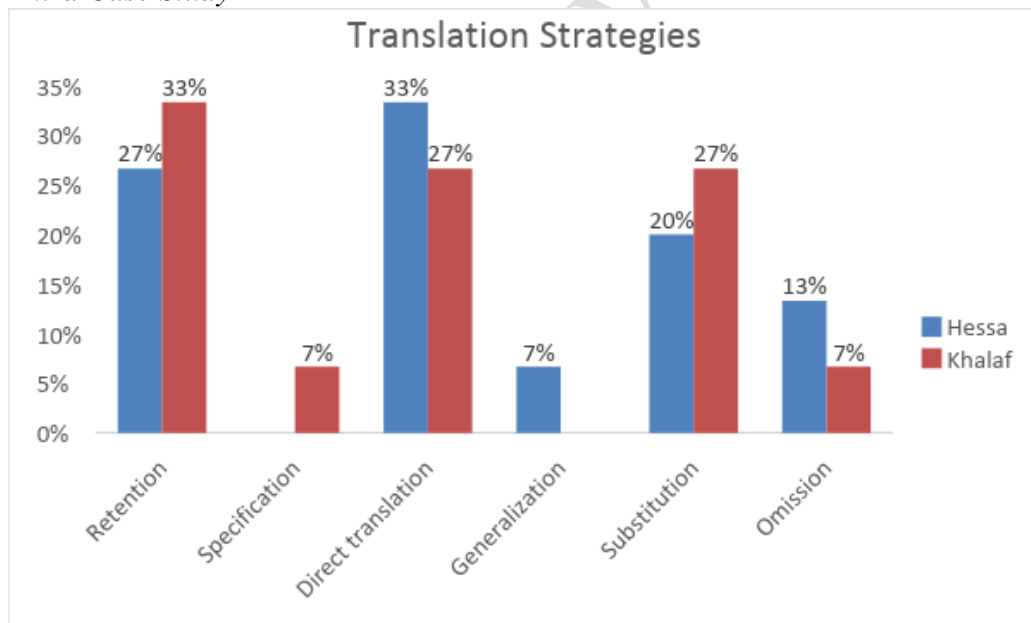

3

4 **Table 13.** *Frequency and Percentage of the Strategies in the Third Case Study*

Strategies	Alammar		Alqurashi	
	Freq.	Per.	Freq.	Per.
Retention	4	27%	5	33%
Specification	0	0%	1	7%
Direct Translation	5	33%	4	27%
Generalization	1	7%	0	0%
Substitution	3	20%	4	27%
Omission	2	13%	1	7%

5

6 **Figure 3.** *Percentage of the Strategies Implemented by Each Translator in the*
 7 *Third Case Study*

8

9

10 The results demonstrate the presence of 15 items from three categories in
 11 the following distribution: 8 material culture (53%), 4 social culture (27%), 3
 12 organizations, customs and ideas (20%). No examples of ecology or gesture
 13 and habits were found.

Alammar and Alqurashi applied five of the six translation strategies, but not the same. While Alammar applied Retention 4 times (27%), Direct Translation 5 times (33%), Generalization once (7%), Substitution 3 times (20%) and Omission twice (13%), Alqurashi applied Retention 5 times (33%), Specification once (7%), Direct Translation 4 times (27%), Substitution 4 times (27%), and Omission once (7%). The variation in the two translations is that Alammar did not employ the Specification strategy while Alqurashi did not employ Generalization.

Table 14. *Cross Tabulation of Culture Category and Translation Strategy in Alammar's Translation*

Count of Translation Strategy (Alammar)	Column Labels					Grand Total
Row Labels	1	3	4	5	6	
2	3	1	1	1	2	8
3		2		2		4
4	1	2				3
Grand Total	4	5	1	3	2	15

Table 15. *Cross Tabulation of Culture Category and Translation Strategy in Alqurashi's 2012 Translation*

Count of Translation Strategy (Alqurashi)	Column Labels					Grand Total
Row Labels	1	2	3	5	6	
2	3		1	4		8
3	1	1	1		1	4
4	1		2			3
Grand Total	5	1	4	4	1	15

Cross-tabulation of the variables resulted in the following frequencies: for material culture, Alammar applied Retention to 3 items, Direct Translation to 1 item, Generalization to 1 item, Substitution to one item and omission to 2

1 items, whereas Alqurashi applied Retention to 3 items, Direct Translation to 1
 2 item and Substitution to 4 items. Both translators applied Retention in the
 3 translation of *Leavenworth prison* (ليفندورث سجن) and Direct Translation to *take*
 4 *me in the smoker now*, with Alammar rendering it as *خذني إلى غرفة التدخين* B.T
 5 *Take me to the smoking room* and Alqurashi rendering it as *خذني الى مقصورة*
 6 *B.T Take me to the smoking cabinet*, so both applied the same strategy
 7 but with different expressions.

8 In the domain of social culture, Alammar applied Direct Translation and
 9 Substitution twice each, whereas Alqurashi applied Retention, Specification,
 10 Direct Translation and Omission once each. The most obvious example here
 11 could be the rendering of *the marshall*. Alammar substitutes the reference with
 12 something the target audience are familiar with *مدير الشرطة* B.T *Police chief*, but
 13 Alqurashi applies Retention (المارشال).

14 For organizations, customs and ideas, Alammar applied Retention once
 15 and Direct Translation twice, and similarly Alqurashi applied Retention once
 16 and Generalization twice. For example, both translated *for counterfeiting*
 17 similarly, with Alammar opting for Direct Translation as *في قضية تزوير*.

18 As previously described, the translators used several strategies when
 19 translating the short story. However, in terms of identifying whether the
 20 translations are source- or target-oriented, a calculation of the source-oriented
 21 strategies (Retention, Specification and Direct Translation) and the target-
 22 oriented strategies (Generalization, Substitution and Omission) must be carried
 23 out. The following tables illustrate the results:

24

Table 16. *Source-Oriented vs. Target-Oriented Strategies in the Third Case Study (Alammar)*

	Alammar	
	Source-oriented	Target-oriented
	4	1
	0	3
	5	2
Sum	9	6
Percentage	60%	40%

Table 17. *Source-Oriented vs. Target-Oriented Strategies in the Third Case Study (Alqurashi)*

	Alqurashi	
	Source-oriented	Target-oriented
	5	0
	1	4
	4	1
Sum	10	5
Percentage	67%	33%

To conclude, using the compiled classification, a total of 15 cultural references were extracted from the corpus. The cultural references were categorised based on Newmark's categorization, as stated earlier, and then the strategies applied by each translator were determined. The researcher calculated and analysed the frequency and percentage of the strategies employed in an attempt to compare and contrast the findings. This case study demonstrates a tendency towards the source culture in both translations: 60% to 40% in the translation strategies applied by Alammar and 67% to 33% in the strategies applied by Alqurashi. The results demonstrate a clear tendency to foreignize in both translations.

1 **Conclusion**

2

3 The first part of this study aimed to establish a framework for the actual
4 case studies, particularly one that could be set forth as a model to evaluate
5 culture within re-translations with regard to determining translation tendency
6 towards the source or target culture. The case studies carried out in this section
7 through the comparison of translation strategies in relation to publication dates
8 of translations and re-translations seem to suggest that translation in the Saudi
9 literary system changes through time, not necessarily due to it being a re-
10 translation but rather due to the receiving culture's dominating norms and
11 degree of acceptance of the source culture. Ideological changes in the target
12 culture might potentially lead to re-translations, but this is not the only reason.

13 Alongside this theoretical background, I believe the analysis of the three
14 case studies offers an additional perspective on the subject and reflect some
15 interesting findings that could be challenged in future research. As well as
16 revisiting the Re-translation Hypothesis, I hope this study has made a
17 methodological point by demonstrating how bringing together theories can be
18 fruitful in conceptualizing and highlighting a phenomenon within translation
19 studies. The results of these three case studies can be considered a contribution
20 to re-translation theory as they highlight the grounds of this phenomenon,
21 which can develop an understanding of it as a whole, and of specific target
22 texts, and can help predict the publication of new versions.

23 The offset of this research began with gathering data in the form of three
24 source texts along with two translations for each source text, distinguishing its

1 cultural references and analysing the strategies employed in the translation
2 process, it was important to identify patterns of behaviour and verify whether
3 they correspond to the retranslation hypothesis. That having been laid out, it is
4 fair to say that the retranslation hypothesis is not a fixed approach in the Saudi
5 literary system. The evidence obtained from the analysis in this paper declare
6 the absence of noticeable differences in the orientation towards the source or
7 target culture between the earlier and the later translations of the same source
8 text. Differences appear between the case studies in general but not as much
9 within them.

10 It is crucial to bear in mind that the methodology implemented while
11 conducting the study can only extract preliminary results. Thus, the hypothesis
12 is still not absolutely proven or refuted. In addition, the testing of different
13 parts of the material can generate different results (De Letter, 2015). Further
14 research in Descriptive Translation Studies is always desired and worth
15 exploring.

16

17

18 **Acknowledgments**

19

20 I would like to express my gratitude to the Ministry of education in Saudi
21 Arabia for funding this research and to Swansea University for all their
22 support.
